WELCOME TO ONLINE VOTING SYSTEM

IT OF THE SOCIETY

WHEN WE ALL
VOTE

The word "vote" means to choose from a list, to elect or to determine. The main goal of voting (in a scenario involving the citizens of a given country) is to come up with leaders of the people's choice. Most countries, India not an exception have problems when it comes to voting. Some of the problems involved include rigging votes during election, insecure or inaccessible polling stations, inadequate polling materials and also inexperienced personnel. This online voting/polling system seeks to address the above issues. It should be noted that with this system in place, the users, citizens in this case shall be given ample time during the voting period. They shall also be trained on how to vote online before the election time

"ONLINE VOTING SYSTEM" is an online voting website. In this system people who have citizenship of India and whose age is above 18 years of age and any sex can give his/her vote online without going to any physical polling station. There is a database which is maintained in which all the names of voters with complete information is stored. In "ONLINE VOTING SYSTEM" a voter can use his/her voting right online without any difficulty. He/she has to be registered first for him/her to vote. Registration is mainly done by the system administrator for security reasons. The system Administrator registers the voters on a special site of the system visited by him only by simply filling a registration form to register voter. Citizens seeking registration are expected to contact the system administrator to submit their details. After the validity of them being citizens of India has been confirmed by the system administrator by comparing their details submitted with those in existing databases such as those as the Registrar Persons, the citizen is then registered as a voter.
